Dr. Joshua Lederberg
Department of Human Genetics
Stanford University School of Medicine
Palo Alto, California

Dear Josh:

In a previous note you indicated an interest in density gradient centrifugation. We are now developing a new high speed instrument in collaboration with Spinco. Since I plan to visit Palo Alto in March or April to go over designs with Dr. Pickels, possibly we could discuss your interests in more detail. I suspect you are interested in separating bacteria of different size from a population as a means of obtaining synchronized cultures. I believe our projected instrument will be able to do this.

Enclosed is one paper and three manuscripts now in press which present evidence for end-to-end linkage of DNA both in vivo and in vitro. I would appreciate any comments you might have.

Sincerely,

A handwritten signature in cursive script that reads "Norman".
